

Setting up the Zoom App on your phone

I have an iPhone, so this comes from the view of an iPhone, but I imagine other smart phones look somewhat similar with regard to the steps here.

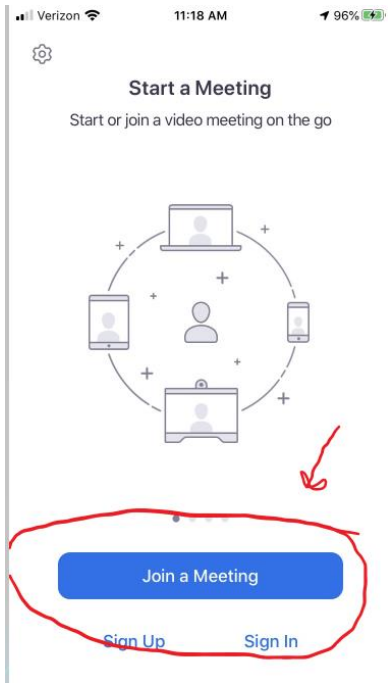

1. Downloading the app- Go in to your APP store and search Zoom. Download the Zoom Cloud Meeting App

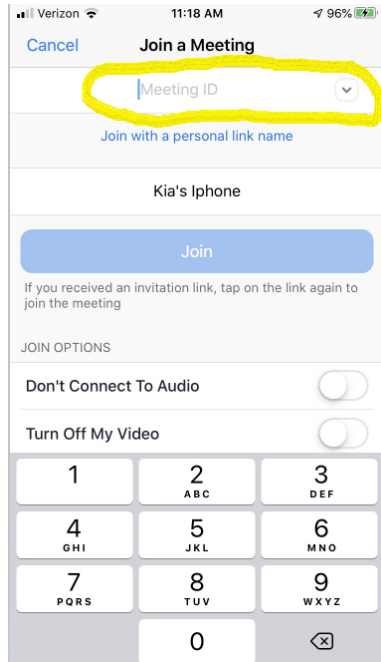

2. Once downloaded, the app should look like this on your screen

3. Once you launch it, you have a couple of options.
 - a. Option 1: Join a meeting directly with the Meeting ID shared with you via email- click join a meeting

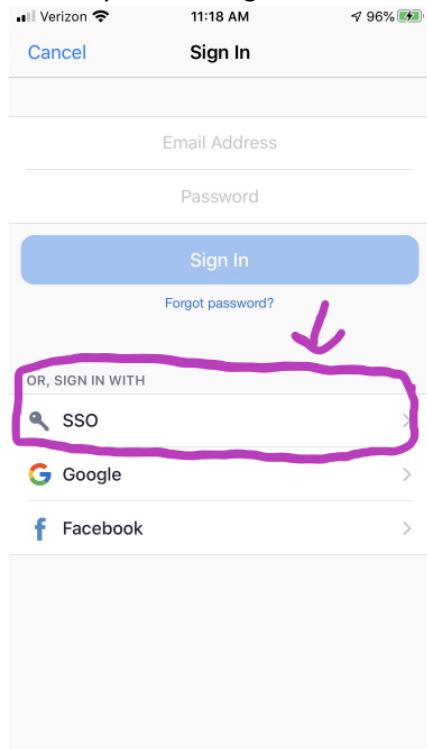

i. Put the meeting ID in here

b. OR- log in to your SSD account, so you can utilize more features (host a meeting, call people etc.)

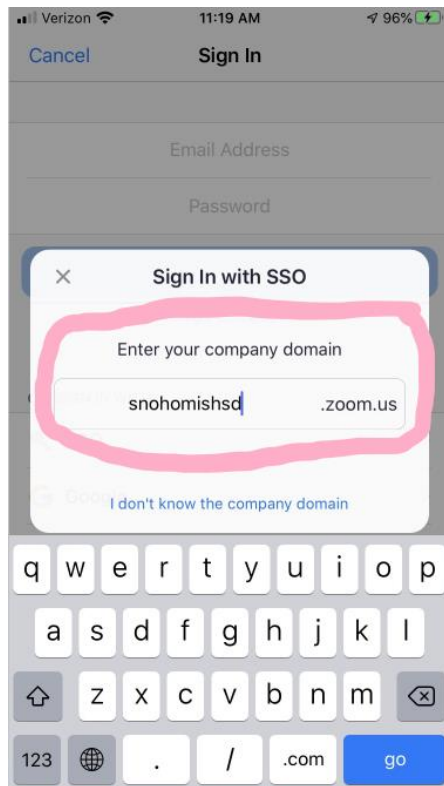

i. Once you click "Sign In" this next screen will populate. Click Sign in with SSO

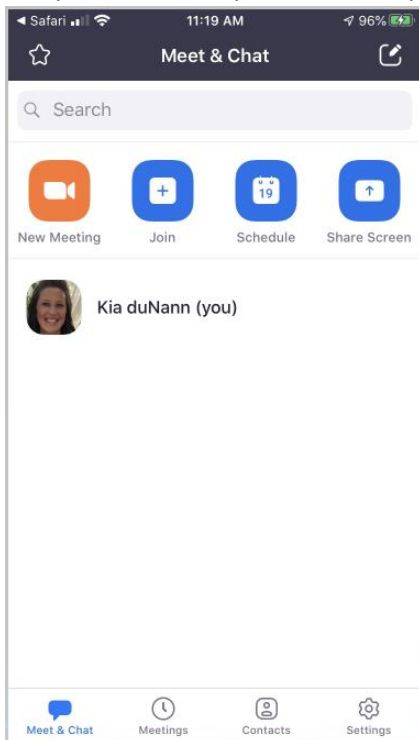

ii. Our SSO Domain is: snohomishsd (**NOT Snohomish.wednet.edu!!!**)

1. It will then prompt you to use your SSD credentials, that one is your full email with Snohomish.wednet.edu (or if you already have onedrive on your phone, it might auto-log you in, FYI)

- c. Once you're in the app, it should look like this (I added my own photo in settings on my comp, so you likely won't have a picture unless you have done that already)

Now you are officially set up and ready to use the APP!
