Endangered Species Project Pathfinder
Ms. Scott

**Introduction:**
Ms. Scott's assignment requires that you select an endangered species, research reasons for it being endangered and creating a brochure about the species. She has given you very specific types of information that she expects to see in your brochure, please make sure your brochure covers all the information she has asked for in her instructions for this assignment. Lastly, government web sites will list both threatened and endangered species, so please make sure you select an endangered species.

**Government Websites:**
To select your endangered species you will want to look at the U.S. Fish & Wildlife page that Ms. Scott has in her assignment handout. Also, here is a link to the U.S. Government Printing Office which keeps the most up-to-date listing of endangered and threatened species (last update on January 9, 2014).

- U.S. Fish & Wildlife Endangered & Threatened Animals List

**References:**
- GVRL's Grzimek's Student Animal Life Resource
- EBSCO's Science Reference Center

**Books:**
You will find a book cart with several books on endangered species. Please feel free to use these for this assignment and you may check them out at the end of the period.

**Internet:**
Once you have selected your endangered species, then you can do an Internet search if you need to locate additional specific information for this assignment. Make sure the web site you use is written by a person or organization that works in the field. Try to stay away from K-12 web sites where students wrote the web page and from commercial web sites. Their information may be inaccurate.

**Microsoft Publisher 2013**
Microsoft Publisher has several brochure templates you can use to create your six panel brochure. Please follow the rubric Ms. Scott has given you for creating your brochure. She is very specific in what she wants to see in each panel, so check your work before printing out your brochure. Also, when you print please select landscape and double sided which can be found under the **Properties** button.
