

Management Support

Staff Safety

The Board recognizes that safety and health standards should be incorporated into all aspects of the operation of the district. Rules for safety and prevention of accidents will be posted in compliance with OSHA and WISHA requirements. All hazardous chemicals will be identified and properly labeled. Staff members will be trained in the use of these chemicals specific to their respective jobs. Proper records will be maintained to verify that all preventive and safety measures are in place. Injuries and accidents will be reported to the district office and the principal using form 3418F3 (accident/incident report) when appropriate.

The district will have at least one staff member at each school and work site in the district who holds a valid certificate of first aid training or equivalent training. Each school and work site will have first aid supplies readily accessible in a first aid station.

The Superintendent will develop necessary safety and health standards to comply with the Department of Labor requirements.
