STRATEGIC PLANNING

Resource and Service Center Planning

In an effort to coordinate strategic planning at the district level with planning efforts at the resource and service center, the resource and service center will create a planning team. The team will consist of administrator(s), specialists, classified staff, and community members working closely and harmoniously and using skills associated with shared decision making to develop, implement, and evaluate plans for improving organizational performance.

The charge of the resource and service center planning team is two fold:

- to act as a conduit between the strategic planning council and the district resource and service center regarding the development of a district vision statement, mission statement, goals, implementation activities and evaluation techniques; and

- to develop an organizational improvement plan for the resource and service center by specifying the mission; goals/objectives; implementation activities including the necessary human, material, monetary and time resources that will improve organizational performance; and evaluation techniques to ensure successful implementation of organizational performance activities.

The superintendent shall be responsible for developing procedures for the resource and service center planning team. The team shall operate within the district's policies and procedures, unless waived by the board; budget parameters established by the board; the requirements of contracts to which the district is party; and all other legal constraints. The team's activities, decisions and recommendations shall be consistent with the district's strategic plan and shall contribute to supporting school based plans.
